1. Introduction

MyAccounting helps you manage your business finances day-to-day — no accounting degree required.

With MyAccounting you can:

- **Send invoices** to your customers and track what they owe you
- **Record payments** when customers pay you
- **Record financial transactions** such as expenses, payroll, and bank fees
- **Track consultant hours** with monthly timesheets
- **Print financial reports** — Income Statement, Balance Sheet, Trial Balance

You do not need to know accounting to use the features described in this guide. Every section walks you through each step with a real example.

2. Logging In

When you start MyAccounting, the **Login** screen appears first.

MyAccounting

Username: []

Password: []

[Sign In]

[Cancel]

Steps:

- 1. Type your **Username** (given to you by your administrator).
- 2. Type your **Password**.
- 3. Click **Sign In**.

If you forget your password, ask your administrator to reset it for you via **Configuration → Users → Reset Password**.

3. The Dashboard — Your Home Screen

After logging in, the **Dashboard** is the first thing you see. It gives you a quick snapshot of where your business stands right now.

MyAccounting

Config

AR BALANCES

Acme Corp \$1,200

ABC Ltd \$ 450

REVENUE CHART

(bar chart by month)

IN-PROCESS JOURNALS

2 entries waiting to be posted

TO-DO LIST

☐ Call Acme Corp

☐ File HST return

Panel	What it shows
AR Balances	Which customers owe you money right now
In-Process Journals	Journal entries saved as Draft that have not been posted yet
Revenue Chart	A bar chart of your monthly revenue
To-Do List	Your own personal reminders and tasks

Adding a To-Do item

1. Click **Add** in the To-Do panel.
2. Type a title and optionally a due date and priority.
3. Click **Save**.

When a task is done, select it and click **Done** ✓.

4. Getting Around — The Sidebar Menu

The **left sidebar** is the main navigation menu. Click any item to open that part of the application.

Menu Item	What it does
Home	Returns you to the Dashboard
Invoicing	Create and manage customer invoices
Cash Receipts	Record payments received from customers
Journal	Enter general journal transactions
Reports	View financial reports
G/L (Chart of Accounts)	View and manage your accounts
Timesheets	Manage consultant timesheets
Rent Service	Track rental service billing records (Forum or Lincoln format)
Utilities	Access Google services (Gmail, Calendar, Drive, Chat, Docs) and the Password Manager
Configuration	Company settings, customers, users (admin)

Tip: Click **EN** or **FR** at the bottom of the sidebar to switch between English and French. The application will restart automatically.

5. Configuration

Configuration is the control centre for your MyAccounting setup. It must be completed before you can create invoices, record cash receipts, or enter timesheets. Click **Configuration** in the left sidebar to open it.

The Configuration screen is organized into **13 tabs**. The tabs you will use most during initial setup are covered first; the reference tabs (Countries, Provinces) are rarely changed after the initial install.

Administrator access is required to make changes. Users with view-only rights can browse all tabs but cannot save.

Recommended setup order

Complete the tabs in this order the first time you configure MyAccounting:

Step	Tab	What you will do
1	Company Info	Enter your business name, address, and logo
2	Fiscal Year & Settings	Define your fiscal year, tax rate, and key GL accounts
3	Tax Codes	Create your HST / GST / PST tax codes
4	Payment Terms	Define your standard payment terms (Net 30, etc.)
5	Countries & Provinces	Verify or add countries/provinces your customers are in
6	Salesmen	Add your consultants or salespeople
7	Customers	Add all client records
8	Inventory	Add the products and services you sell
9	Projects	Add project codes if you track work by project
10	Email Settings	Set up SMTP so invoices can be emailed
11	Timesheet	Configure shift defaults and approval requirements
12	Users	Add user accounts (admin only)

Tab 1 — Company Info

This is the information that prints on every invoice PDF and every timesheet PDF sent to clients. Fill it in accurately before you send your first invoice.

CONFIGURATION — Company Info

Company Name:

[16272649 Canada Inc]

Address Line 1:

[7227 Newman Boulevard]

Address Line 2:

[Unit 1504]

City:

[Montreal]

Province:

[Quebec]

Postal Code:

[H8N 0H7]

Country:

[Canada]

Phone:

[514-827-6244]

Fax:

[]

Email:

[daniel@seguin.dev]

Website:

[daniel.seguin.dev]

Logo Path:

[C:/Users/danie/.../logo.jpg]

[Browse...]

[Save Company Info]

Field	What to enter
Company Name	Your legal business name — appears on all PDFs
Address Line 1	Street number and street name
Address Line 2	Suite, unit, or PO Box (optional)
City	City or municipality
Province	Province or state
Postal Code	Canadian format: A1A 1A1 — US format: 12345
Country	Country name
Phone / Fax	Format: (514) 827-6244
Email	Your business contact email
Website	Your business website URL
Logo Path	Full path to your company logo image file (.png , .jpg). Click Browse... to pick the file. The logo prints in the top-left corner of every invoice and timesheet PDF.

Click **Save Company Info** when done.

Tab 2 — Fiscal Year & Settings

These settings control how invoices are numbered, which GL accounts are used for automatic postings, and how taxes are calculated. **This tab has the greatest impact on invoicing and cash receipts** — get it right before you begin.

Field	What to enter	Example
Fiscal Year Start	First day of your fiscal year (YYYY-MM-DD)	2026-01-01
Fiscal Year End	Last day of your fiscal year (YYYY-MM-DD)	2026-12-31
Tax Rate (%)	Default tax rate applied to invoices	13 (Ontario HST)
Currency	3-letter currency code	CAD or USD
Invoice Prefix	Short text prepended to invoice numbers	INV → generates INV-0001
Next Invoice #	Next sequential invoice number to assign	42
Next Journal #	Next sequential journal entry number to assign	100
A/R Account #	Accounts Receivable GL account. Cash receipts credit this account.	1200
Revenue Account #	Default revenue GL account debited when invoices are posted	4000
Tax Account #	GL account where HST/GST collected is recorded	2100
Cash Account #	Default bank/cash GL account for cash receipts	1010

Why GL accounts matter here: When you post an invoice, MyAccounting automatically creates a journal entry:

DR A/R Account (what the customer owes) **CR** Revenue Account (your income) **CR** Tax Account (HST collected).

When you post a cash receipt:

DR Cash Account (money received in bank) **CR** A/R Account (balance reduced).

If these accounts are wrong, your financial reports will be incorrect.

Click **Save Settings** when done.

Tab 3 — Tax Codes

Tax codes define the tax rates applied to invoices. A single tax code can have multiple **components** — for example Canadian HST is a single combined tax, while in Quebec you have GST + QST as two separate components.

TAX CODES			
[Add Tax Code] [Edit Tax Code] [Delete Tax Code]			
Code	Name	Total Rate %	Components
HST-ON	Ontario HST	13.00 %	HST
GST-QST	Quebec GST+QST	14.975 %	GST + QST

Tax Code fields:

Field	Description
Code	A short unique identifier (max 10 characters), e.g., <code>HST-ON</code>
Name	A readable name, e.g., <code>Ontario HST</code>

Tax Components (one or more per code):

Field	Description
Seq	Order of the component (1, 2, ...)
Name	Component label printed on the invoice, e.g., <code>HST</code> , <code>GST</code> , <code>QST</code>
Rate (%)	The percentage for this component, e.g., <code>13</code> , <code>5</code> , <code>9.975</code>
Tax Account	The GL liability account where this tax is recorded (e.g., <code>2100 - HST Payable</code>)

Example — Quebec: Create one tax code `GST-QST` with two components: GST at 5% → account 2110, and QST at 9.975% → account 2120. The total displayed on invoices will be 14.975%.

Click **Add Tax Code**, fill in the header, then click **Add Component** for each tax component. Click **Save**.

Tab 4 — Payment Terms

Payment terms are the conditions under which a customer is expected to pay. They appear on invoice PDFs and can be assigned to individual customers.

Example term	Meaning
<code>Net 30</code>	Full balance due within 30 days
<code>Net 15</code>	Full balance due within 15 days
<code>Due on Receipt</code>	Payment expected immediately
<code>2/10 Net 30</code>	2% discount if paid within 10 days, otherwise full balance in 30 days

Click **Add Payment Terms**, type the name, and click **Save**. Repeat for each term you use.

Tab 5 — Countries

Countries is the reference list the application uses to populate country dropdowns in the Customer form and to auto-fill the currency. MyAccounting ships with Canada and the United States pre-loaded. Add additional countries only if you bill customers outside those two.

Field	Description
Code	2- or 3-letter ISO country code, e.g., <code>CA</code> , <code>US</code> , <code>GB</code>
Name	Full country name, e.g., <code>United Kingdom</code>
Currency	3-letter currency code assigned to this country, e.g., <code>GBP</code>

When a new customer's **Country** is selected, the **Currency** field on their record fills in automatically from this table.

Tab 6 — Provinces

Provinces (and US States) are the reference list used to populate the Province/State dropdown on customer records. MyAccounting ships with all Canadian provinces and US states. Only add entries here if you operate in territories not already listed.

Field	Description
Country	The country this province belongs to (select from dropdown)
Code	Short province/state code, e.g., <code>QC</code> , <code>ON</code> , <code>NY</code>
Name	Full name, e.g., <code>Quebec</code> , <code>Ontario</code> , <code>New York</code>

Tab 7 — Salesmen

Salesmen in MyAccounting represent the **consultants or salespeople** in your business. They are assigned to invoices and timesheets and their name appears on invoice PDFs. Each salesman can also have Google OAuth credentials for sending emails through their own Google account.

SALESMAN

Name: [Jane Smith]

Signature Image: [C:/images/jane_sig.png] [Browse...]

— Google Account Settings —

Google Email: [jane@example.com]

OAuth Client ID: [123456789-abc.apps.googleusercontent.com]

Client Secret: [.....]

Refresh Token: [.....]

[Save]

[Cancel]

Field	Description
Name	The salesman's full name — appears on invoice PDFs and timesheet PDFs
Signature Image	Path to a <code>.png</code> or <code>.jpg</code> file of the salesman's signature. It prints at the bottom of their timesheet PDFs. Click Browse... to choose the file.
Google Email	The Gmail address to use when emailing timesheets (optional)
OAuth Client ID	From Google Cloud Console → APIs & Services → Credentials (optional)
Client Secret	From Google Cloud Console — stored encrypted (optional)
Refresh Token	Obtained after completing the Google OAuth flow (optional)

Google fields are only needed if the salesman wants to send timesheet emails from their own Gmail address. Leave them blank to use the company SMTP settings (Tab 10 — Email Settings). See [SetupGoogleServicesWithMyAccounting.pdf](#) for full Google OAuth setup instructions.

Tab 8 — Customers

Customers is your master client list. **Every customer must be set up here before you can create an invoice for them.** Each customer record has three sub-tabs inside the dialog: **General**, **Ship-To**, and **Settings**.

Customer — General tab

Field	Description
Company	Legal company name (required)
Contact	Primary contact person's name
Address 1 / 2	Street address
City	City
Country	Select from dropdown — sets the currency automatically
Province	Select from dropdown (filtered by chosen Country)
Postal / ZIP	Validated automatically: Canadian format <code>A1A 1A1</code> , US format <code>12345</code>
Phone / Cell / Fax	Format: <code>(514) 827-6244</code> — validated on save
Email	Customer's billing email address — used by the Email Invoice button
Website	Customer's website URL — click  to open in browser
Currency	Filled automatically from the Country table; read-only
Type	Optional classification (e.g., <code>Corporate</code> , <code>Government</code> , <code>Individual</code>)

Client Manager section (the person who approves timesheets at the client):

Field	Description
Name	Client manager's full name — appears on timesheet emails
Phone	Manager's direct phone
Email	Manager's email — timesheet PDFs are sent here

Customer — Ship-To tab

If the customer's shipping address differs from their billing address, enter it here.

- Check **Same as billing address** to auto-copy the billing address and lock these fields.
- Otherwise enter Country, Province/State, Address 1, Address 2, City, and Postal/ZIP separately.

Customer — Settings tab

Field	Description
Salesman	The consultant or salesperson responsible for this account. Defaults onto new invoices.
Revenue Account #	Override the default revenue GL account for invoices to this customer (optional)
Tax Code	The tax code applied to invoices for this customer (e.g., <code>HST-ON</code>)
Credit Limit	Maximum outstanding balance allowed (optional — informational only)
Payment Terms	Standard terms such as <code>Net 30</code> — printed on invoice PDFs
Language	<code>en</code> or <code>fr</code> — controls the language of PDF documents generated for this customer
Invoice Delivery	Preferred delivery method: <code>email</code> , <code>mail</code> , <code>fax</code> , or <code>none</code>
Notes	Free-text internal notes about the customer (not printed on invoices)

Tip: Set the Tax Code and Payment Terms on each customer record so they pre-fill automatically every time you create a new invoice for that customer.

Tab 9 — Inventory

Inventory holds the **products and services** you sell. When you add a line item to an invoice, you select an item from this list — the description and unit price fill in automatically. This tab saves time and ensures consistent pricing.

Field	Description
Item Code	A unique short code for the item, e.g., <code>CONSULT</code> , <code>TRAVEL</code> (required)
Description	The text that appears on the invoice line, e.g., <code>Consulting Services</code>
Type	Optional classification, e.g., <code>Service</code> , <code>Product</code> , <code>Expense</code>
Unit	Unit of measure: <code>Hour</code> , <code>Day</code> , <code>Each</code> , <code>Month</code> , etc.
Price	The default selling price per unit
Cost	Your internal cost per unit (optional — for margin tracking)
GL Account	The revenue GL account credited when this item is invoiced (overrides the default revenue account)

Example items to create:

- `CONSULT` — Consulting Services — \$120.00/Hour
- `TRAVEL` — Travel Expenses — \$0.00/Each (enter actual amount on the invoice)
- `RETAINER` — Monthly Retainer Fee — \$5,000.00/Month

Tab 10 — Projects

Projects let you tag invoices and timesheets to a specific engagement or contract. The project code appears on invoice PDFs and timesheet PDFs.

Field	Description
Project Code	A unique identifier for the project, e.g., <code>PROJ-2026-01</code> , <code>ACME-PORTAL</code>
Start Date	The project start date (<code>MM/DD/YYYY</code>)

Use projects when you work on multiple engagements for the same client simultaneously, or when you need to track revenue and hours by contract.

Tab 11 — Email Settings

These settings control how MyAccounting sends invoice and timesheet emails. Fill this tab in before you try to email your first invoice or timesheet.

EMAIL SETTINGS

SMTP Host:

[smtp.gmail.com]

SMTP Port:

[587]

SMTP User:

[you@yourdomain.com]

SMTP Password:

[.....]

Use TLS (1/0):

[1]

Support Email:

[support@yourdomain.com]

Invoice Email Subject:

[Invoice {invoice_number} from {company}]

Invoice Email Body:

[(multi-line text area)]

[Save Email Settings]

Field	Description
SMTP Host	Your outgoing mail server address, e.g., <code>smtp.gmail.com</code> , <code>smtp.office365.com</code>
SMTP Port	<code>587</code> for TLS/STARTTLS (most common), <code>465</code> for SSL, <code>25</code> for unencrypted
SMTP User	The email account username (usually the full email address)
SMTP Password	The account password or app-specific password — stored masked
Use TLS (1/0)	Set to <code>1</code> to use TLS encryption (recommended). Set to <code>0</code> only for non-encrypted servers.
Support Email	The “Reply-To” address shown in the Support button in the toolbar
Invoice Email Subject	Subject line for invoice emails. Use placeholders (see below).
Invoice Email Body	The body text of the invoice email. Use placeholders to personalize.

Available placeholders in the Subject and Body:

Placeholder	Replaced with
<code>{invoice_number}</code>	The invoice number, e.g., <code>INV-0042</code>
<code>{customer}</code>	The customer company name
<code>{total}</code>	The invoice total amount
<code>{company}</code>	Your company name (from Company Info)
<code>{date}</code>	Today’s date

Example body:

Dear {customer},

Please find attached invoice {invoice_number} for {total}.

This invoice is due as per your payment terms.

Thank you for your business.

{company}

Gmail users: Google requires an **App Password** instead of your regular password when SMTP access is enabled. Standard Gmail passwords are rejected by Google's SMTP server even with the correct credentials — an App Password is a 16-character code that grants MyAccounting permission to send email on your behalf without exposing your main account password.

To generate one:

1. Go to myaccount.google.com → **Security**.
2. Ensure **2-Step Verification** is turned on (App Passwords require it).
3. Under **Security**, click **App Passwords** (you may need to search for it).
4. Select app: **Mail** — Select device: **Windows Computer** (or any label you choose).
5. Click **Generate**. Copy the 16-character password shown.
6. Paste it into the **SMTP Password** field in MyAccounting.

Recommended Gmail settings:

- **SMTP Host:** `smtp.gmail.com`
 - **SMTP Port:** `587`
 - **TLS:** `1` (enabled)
 - **SMTP User:** your full Gmail address (e.g. `yourname@gmail.com`)
 - **SMTP Password:** the 16-character App Password (no spaces)
-

Office 365 users: Microsoft 365 / Office 365 accounts use a different SMTP endpoint. Ensure your Microsoft 365 admin has enabled **SMTP AUTH** for your mailbox (it may be disabled by default in some tenants).

Recommended Office 365 settings:

- **SMTP Host:** `smtp.office365.com`
- **SMTP Port:** `587`
- **TLS:** `1` (STARTTLS)
- **SMTP User:** your full Office 365 email address (e.g. `yourname@yourcompany.com`)
- **SMTP Password:** your regular Microsoft 365 account password, or an App Password if your organization enforces Multi-Factor Authentication (MFA).

If emails fail to send, contact your Microsoft 365 administrator to confirm that **Authenticated SMTP** (**SMTP AUTH**) is enabled for your account under **Microsoft 365 Admin Center** → **Users** → **Active users** → **Mail** → **Manage email apps**.

Tab 12 — Timesheet

These settings apply to the Timesheets module. Configure them before consultants begin entering their hours.

TIMESHEET SETTINGS

Default Shift:
 [9 to 5 – 09:00–12:00 / 12:30–17:00 (7.5 hrs) ▼]

☐ Require client approval for timesheets
 (approval request included in email)

— Daily Check-In Reminder —

Reminder Time (HH:MM): [09:00]

[Save Timesheet Settings]

Setting	Description
Default Shift	When a consultant uses Fill Month to populate a full month in one click, this shift template sets the default AM and PM start/end times for every working day. Choose between <code>8 to 4</code> (08:00–12:00 / 12:30–16:00, 7.5 hrs) and <code>9 to 5</code> (09:00–12:00 / 12:30–17:00, 7.5 hrs). The consultant can still edit individual days afterward.
Require Client Approval	When checked, the email sent to the client when a timesheet is submitted includes a request for the client to formally approve the timesheet before it is considered accepted. Leave unchecked if your contract does not require client-side sign-off.
Reminder Time (HH:MM)	A daily popup reminder appears once per day at this time, prompting the consultant to log into the personal growth tracker at <code>seguin.dev</code> . Enter in 24-hour format, e.g., <code>09:00</code> . Leave blank to disable the reminder.

Tab 13 — Users (Admin only)

The Users tab is visible only to users with the **admin** role. Use it to manage who can log in and what they can do.

USERS

[Add User] [Edit User] [Reset Password] [Delete User]

ID	Username	Role	Full Name
1	admin	admin	Daniel S.
2	jsmith	user	Jane Smith

Field	Description
Username	Login name — case-sensitive, no spaces
Role	<code>admin</code> — full access including Configuration; <code>user</code> — standard access; <code>view only</code> — read-only access to all modules
Full Name	Display name shown in the application
Password	Set at creation; click Reset Password to issue a new one for an existing user

Best practice: Create a separate named account for each person. Never share the `admin` account. Use `view only` for anyone who only needs to read reports.

6. Creating an Invoice

Invoices are how you bill your customers for services rendered.

Step 1 — Open the Invoicing module

Click **Invoicing** in the sidebar. You will see a list of all your invoices.

INVOICING				
[New Invoice] [Edit] [Delete] [Print PDF] [Email]				
Invoice #	Date	Customer	Total	Status
INV-0042	04/15/2026	Acme Corp	\$1,356.00	Approved
INV-0043	04/17/2026	ABC Ltd	\$ 508.50	Draft

Step 2 — Click New Invoice

The **New Invoice** form opens:

NEW INVOICE

Invoice Date: [04/18/2026] [📅]

Customer: [] ▼

Salesman: [] ▼

Project: [] ▼

Comments: []

LINES [Add Line] [Edit] [Delete]

Description	Qty	Price	Amount
(empty)			

Subtotal: \$0.00 HST (13%): \$0.00

Total: \$0.00

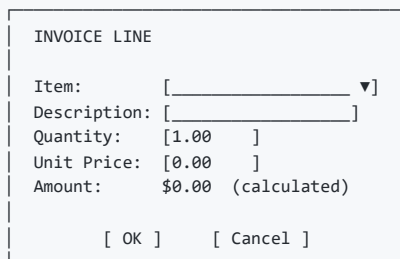

[Save] [Close]

Step 3 — Fill in the header

Field	What to enter
Invoice Date	Today's date (already filled in) — change if needed
Customer	Click the dropdown and pick the customer you are billing
Salesman	The consultant or salesperson responsible (optional)
Project	The project this invoice relates to (optional)
Comments	Any note you want printed at the bottom of the invoice (optional)

Step 4 — Add a line item

Click **Add Line**. A small window appears:

INVOICE LINE

Item: [_____ ▼]
Description: [_____]
Quantity: [1.00]
Unit Price: [0.00]
Amount: \$0.00 (calculated)

[OK] [Cancel]

1. Choose an **Item** from the dropdown (e.g., "Consulting Services").
2. The **Description** and **Unit Price** fill in automatically.
3. Change the **Quantity** if you billed more than 1 unit.
4. Click **OK**.

Repeat for each line on the invoice. The **Subtotal**, **HST**, and **Total** update automatically at the bottom.

Step 5 — Save and approve

- Click **Save** — the invoice is saved with status **Draft**.
- To finalize it, select it in the list and click **Approve** in the toolbar.

Draft invoices can still be changed. **Approved** invoices are locked and are included in your AR balance.

Step 6 — Print or email the invoice

Select the invoice in the list, then:

- Click **Print PDF** to save or open a PDF copy.
- Click **Email Invoice** to send the PDF directly to the customer.

Example — Invoice for consulting services

Scenario: You billed Acme Corp for 10 hours of consulting at \$120/hour on April 18, 2026.

Field	Value
Invoice Date	04/18/2026
Customer	Acme Corp
Item	Consulting Services
Quantity	10
Unit Price	\$120.00
Amount	\$1,200.00
HST (13%)	\$156.00
Total	\$1,356.00

The invoice PDF will show your company name, the customer address, line items, HST, and total amount due.

7. Recording a Cash Receipt

When a customer pays you, record it here so the outstanding balance is reduced.

Step 1 — Open Cash Receipts

Click **Cash Receipts** in the sidebar.

CASH RECEIPTS				
[New Receipt] [Edit] [Delete] [Post]				
Receipt #	Date	Customer	Amount	Status
CR-0011	04/15/2026	Acme Corp	\$1,356.00	Posted
CR-0012	04/18/2026	ABC Ltd	\$ 508.50	Draft

Step 2 — Click New Receipt

NEW CASH RECEIPT

Receipt Date:

[04/18/2026]

[📅]

Customer:

▼

Amount:

[0.00]

Invoice:

▼

(opt.)

Bank Account:

[1010]

AR Account:

[1200]

Memo:

(opt.)

[Verify]

[Post]

[Save]

[Close]

Step 3 — Fill in the fields

Field	What to enter
Receipt Date	The date the payment was received
Customer	Who paid you
Amount	The payment amount
Invoice	Link to the invoice being paid (optional but recommended)
Bank Account	The account number for your bank (pre-filled from settings)
AR Account	The Accounts Receivable account (pre-filled from settings)
Memo	Cheque number or reference note (optional)

Step 4 — Verify, then Post

1. Click **Verify** to see a preview of the accounting entries that will be created.
2. Review the verification listing:

Acme Consulting Inc.
CASH RECEIPT VERIFICATION LISTING
April 18, 2026

```
=====
Receipt #:   CR-0013
Date:       04/18/2026
Customer:   Acme Corp
Invoice #:  INV-0042
Amount:     $1,356.00
```

Proposed GL Entries:

```
DR  1010  (Bank/Cash Account)    $1,356.00
CR  1200  (Accounts Receivable)  $1,356.00
=====
```

3. If everything looks correct, click **Post**.

Important: Once posted, a cash receipt cannot be changed. Always click **Verify** first.

Example — Customer pays their invoice

Scenario: Acme Corp mails you a cheque for \$1,356.00 on April 18, 2026 for invoice INV-0042.

Field	Value
Receipt Date	04/18/2026
Customer	Acme Corp
Amount	\$1,356.00
Invoice	INV-0042
Memo	Cheque #4471

After posting, Acme Corp’s outstanding balance on the Dashboard drops by \$1,356.00.

8. General Journal Entries

The General Journal is where you record transactions that are not invoices or customer payments — for example: paying a bill, recording a bank fee, or making a payroll entry.

New to accounting? Every journal entry has two sides that must always balance:

- **Debit (DR)** — money going into an account (e.g., money entering your bank account)
- **Credit (CR)** — money going out of an account (e.g., money leaving your bank when you pay an expense)

The total Debits must always equal the total Credits on every entry.

Step 1 — Open the Journal

Click **Journal** in the sidebar.

GENERAL JOURNAL			
[New Entry] [Edit] [Delete] [Verify] [Post]			
Entry #	Date	Description	Status
JE-0021	04/10/2026	Office supplies expense	Posted
JE-0022	04/18/2026	Bank service charge	Draft

Step 2 — Click New Entry

NEW JOURNAL ENTRY

Entry Date: [04/18/2026] [📅]

Description: [_____]

Reference: [_____] (cheque #, etc.)

LINES [Add Line] [Edit Line] [Delete Line]

Account	Debit	Credit
(empty)		

Total Debits: \$0.00 Total Credits: \$0.00
Difference: \$0.00 ✓ (must be \$0.00 before posting)

[Save] [Close]

Step 3 — Fill in the header

Field	What to enter
Entry Date	The date of the transaction
Description	A short explanation (e.g., "Monthly bank fee")
Reference	Optional — cheque number, wire reference, etc.

Step 4 — Add lines

Click **Add Line** for each line. A small window appears:

JOURNAL LINE

Account: [5500 - Bank Charges ▼]

Description: [Monthly bank fee]

Debit: [25.00]

Credit: [0.00]

[OK] [Cancel]

- Start typing in the **Account** field to filter the list by number or name.
- Enter the amount in **Debit** or **Credit** — leave the other as **0.00**.
- You need **at least two lines**, and the total Debits must equal the total Credits.

Step 5 — Save and Post

1. Click **Save** — the entry is saved as **Draft**.
2. Click **Verify** to review the entry before it is committed.
3. Click **Post** to record it permanently in the General Ledger.

Example 1 — Recording a bank service charge

Scenario: Your bank charged a \$25.00 monthly fee on April 18, 2026.

Header:

Field	Value
Entry Date	04/18/2026
Description	Monthly bank service charge
Reference	(leave blank)

Lines:

Account	Description	Debit	Credit
5500 – Bank Charges	Monthly bank fee	\$25.00	
1010 – Bank Account	Monthly bank fee		\$25.00

The expense goes **up** (debit to the expense account) and the bank balance goes **down** (credit to the bank account).

Example 2 — Recording an office supply purchase paid by cheque

Scenario: You bought \$150.00 of office supplies on April 18, 2026 with cheque #2201.

Header:

Field	Value
Entry Date	04/18/2026
Description	Office supplies
Reference	Cheque #2201

Lines:

Account	Description	Debit	Credit
5100 – Office Supplies	Supplies purchase	\$150.00	
1010 – Bank Account	Cheque #2201		\$150.00

Example 3 — Recording payroll

Scenario: You paid \$3,500.00 net payroll to a consultant on April 18, 2026 via bank transfer.

Header:

Field	Value
Entry Date	04/18/2026
Description	Payroll – April 18, 2026
Reference	Wire transfer

Lines:

Account	Description	Debit	Credit
5200 – Salaries & Wages	Payroll expense	\$3,500.00	
1010 – Bank Account	Payroll payment		\$3,500.00

Note: This is a simplified payroll entry. Your accountant may advise additional lines for source deductions (CPP, EI, income tax payable). Ask them what accounts to use.

9. Timesheets

Use timesheets to track the hours your consultants work for each client each month.

Step 1 — Open Timesheets

Click **Timesheets** in the sidebar.

TIMESHEETS Year: [2026 ▼] Month: [April ▼] Consultant: [All ▼] |
[New] [Edit] [Delete] [Print PDF] [Send to Client]

ID	Consultant	Client	Period	Hrs	Status
TS-012	Jane Smith	Acme Corp	Apr 2026	80.0	Approved
TS-013	John Doe	ABC Ltd	Apr 2026	64.5	Draft

Use the **Year**, **Month**, and **Consultant** dropdowns at the top to filter the list.

Step 2 — Create a new timesheet

Click **New**. Fill in the header:

NEW TIMESHEET

Consultant: [_____ ▼]

Year: [2026 ▼] Month: [April ▼]

Client: [_____ ▼]

Project: [_____ ▼] (opt.)

Notes: [_____]

[Save]

[Close]

Field	What to enter
Consultant	The person whose hours you are recording
Year / Month	The billing month (only one timesheet per consultant per month is allowed)
Client	The client the consultant worked for
Project	Related project code (optional)
Notes	Any general note about the month (optional)

Click **Save** to create the timesheet. The daily entry grid appears.

Step 3 — Enter daily hours

The timesheet shows each calendar day of the month. Select a date row and click **Add Work Item**:

WORK ITEM — April 18, 2026

Description: [Developed new reporting module _____]

Azure Work Item: [4821 _____] (optional)

AM Start: [09:00] AM End: [12:00]

PM Start: [13:00] PM End: [17:00]

Other hrs: [_____]

Total hours today: 7.0 (calculated automatically)

[OK]

[Cancel]

- Enter a **Description** of what was done that day.
- Enter **Start** and **End** times — hours are calculated automatically.
- Use **AM** for morning, **PM** for afternoon, **Other** for anything outside normal hours.
- Accepted time formats: 9:00 , 09:00 , 0900 , 9:30 .

Repeat for each working day of the month.

Step 4 — Submit, Approve, and Send

Work through the status steps in order:

Draft —[Submit]→ Submitted —[Approve]→ Approved
—[Reject]→ Rejected
Rejected —[Reset to Draft]→ Draft

Step	Who does it	How
Submit	Consultant	Select the timesheet → click Submit
Approve	Manager / Admin	Select the timesheet → click Approve
Send to Client	Manager / Admin	Select an Approved timesheet → click Send to Client

Once **Approved**, you can:

- Click **Print PDF** for a printable landscape-format PDF showing all daily entries and total hours.
- Click **Send to Client** to email the PDF directly to the client's manager.

Example — April timesheet for a consultant

Scenario: Jane Smith worked at Acme Corp throughout April 2026.

Timesheet header:

Field	Value
Consultant	Jane Smith
Year / Month	2026 / April
Client	Acme Corp
Project	Project Alpha

Sample daily entries (first three days):

Date	Description	AM	PM	Hours
Apr 1	Discovery meeting & planning	09:00 – 12:00	13:00 – 17:00	7.0
Apr 2	Database design	09:00 – 12:00	13:00 – 17:00	7.0
Apr 3	API development	09:00 – 12:00	13:00 – 17:00	7.0
...	...	...	...	...

The **Total Hours** for the month is calculated automatically from all daily entries.

10. Financial Reports

Click **Reports** in the sidebar to view your financial reports.

REPORTS

Report Type:

Trial Balance

Income Statement

Balance Sheet

From:

[01/01/2026]

To:

[12/31/2026]

[Generate]

(report appears here after clicking Generate)

[Export PDF]

[Export Excel]

The three reports explained in plain language

Report	What it tells you
Trial Balance	A complete list of all accounts with their current balances. The Debit total and Credit total at the bottom must match — if they do, your books are balanced.
Income Statement	How much money came in (revenue) minus how much went out (expenses) for a period. The bottom line is your net income (profit) or net loss.
Balance Sheet	A snapshot of what your business owns (assets), what it owes (liabilities), and the difference (equity) as of a specific date.

How to generate a report

1. Select the report type.
2. Set the **From** and **To** dates (they default to your fiscal year).
3. Click **Generate** — the report appears on screen.
4. Click **Export PDF** or **Export Excel** to save a copy.

11. Chart of Accounts

The **Chart of Accounts** is the list of all the numbered accounts used to categorize your money. Think of it as a filing cabinet — every dollar that comes in or goes out is filed under one of these account numbers.

Click **G/L** (or **Chart of Accounts**) in the sidebar.

CHART OF ACCOUNTS			
[New Account] [Edit] [Delete] [Transactions] [Export]			
Account#	Name	Type	Balance
1010	Bank Account	Asset	\$22,450.00
1200	Accounts Receivable	Asset	\$ 1,764.50
2100	HST Payable	Liability	\$ 456.00
4000	Consulting Revenue	Revenue	\$48,000.00
5100	Office Supplies	Expense	\$ 750.00
5200	Salaries & Wages	Expense	\$28,000.00

Account number ranges

Range	Category	Plain-language meaning	Appears on
1000 – 1999	Asset	Things the business owns (cash, receivables)	Balance Sheet
2000 – 2999	Liability	Things the business owes (taxes, loans)	Balance Sheet
3000 – 3999	Equity	The owner's share of the business	Balance Sheet
4000 – 4999	Revenue	Money coming in from customers	Income Statement
5000 – 9999	Expense	Money going out to run the business	Income Statement

Viewing transaction history for an account

1. Select an account in the list.
2. Click **Transactions**.
3. Every debit and credit ever posted to that account is displayed with its date and description.

Important: Contact your accountant before adding, editing, or deleting accounts. Changes to account numbers can affect your financial reports.

12. Rent Service

The **Rent Service** module lets you track rental service billing records and generate PDF reports in two formats used by real estate clients: **Forum** (commission-based) and **Lincoln** (rental service with deposits). Records can be created manually or imported directly from Excel templates.

Note: The Rent Service button in the sidebar is only visible when at least one report format is configured for your registration key. Contact your administrator if you do not see it.

Step 1 — Open Rent Service

Click **Rent Service** in the sidebar. The list view shows all existing records.

RENT SERVICE					
[New] [Edit] [Delete] [Import Excel] [Print PDF]					
ID	Date	Type	Customer	Lines	Status
RS-001	05/04/2026	Forum	HMT Capital	7	Draft
RS-002	05/04/2026	Lincoln	2170 Lincoln	18	Approved

Step 2 — Create a new record

Click **New**. Fill in the record header:

Field	What to enter
Report Type	Forum (commission invoice) or Lincoln (rental service invoice)
Report Date	The date of the billing record
Customer	The client this record is billed to
Notes	Any internal notes (not printed on the PDF)

Click **Save** to create the record. The line-item grid appears.

Step 3 — Add line items

Click **Add Line**. The fields shown depend on the report type chosen:

Forum format line fields:

Field	Description
Unit #	The rental unit identifier, e.g., 1425-1
Lease Start	The date the lease began (MM/DD/YYYY)
Comm. Rate	Commission rate as a decimal, e.g., 0.06 for 6%
Rent / Month	Monthly rent amount
Months	Number of months in the lease (typically 12)
Amount	Calculated automatically: Comm. Rate × Rent/Month × Months

Lincoln format line fields:

Field	Description
Unit #	The rental unit identifier, e.g., 614 , 1908
Service	Service description, e.g., Rental Service
Move-in Date	The tenant's move-in date (MM/DD/YYYY)
Parking	Parking fee (if applicable)
Rent	Monthly rent amount
Deposits	Security deposit deducted from the first payment
Amount	Calculated automatically: Parking + Rent - Deposits

Add one line per rental unit. Click **OK** after each line.

Step 4 — Import from Excel (optional)

Instead of entering lines manually, you can import them directly from a Forum (.x1sm) or Lincoln (.x1sx) Excel template:

1. Click **Import Excel** in the toolbar.
2. Browse to the Excel file and click **Open**.
3. MyAccounting auto-detects the format (Forum or Lincoln) from the sheet structure.
4. All data rows are imported and the lines grid is populated automatically.

Supported Excel layouts:

- **Forum:** An .x1sm file with a "Commission Invoice" sheet. Columns: Unit #, Lease Start, Comm. Rate, Rent/Month, Months.
- **Lincoln:** An .x1sx file with one or more numbered sheets (e.g., 001 , 002). Columns: Service, Unit, Move-in Date, Parking, Rent, Deposits.

Step 5 — Status workflow

Status	Meaning
Draft	Being prepared — can be edited or deleted
Submitted	Sent for review
Approved	Reviewed and accepted
Paid	Payment has been received

Use the toolbar buttons (**Submit**, **Approve**, **Mark Paid**) to advance a record through the workflow.

Step 6 — Print the PDF report

Select an Approved record and click **Print PDF**. The report opens (and optionally saves as a PDF). The layout matches the billing format:

- **Forum PDF:** Commission invoice showing Unit #, Lease Start, Commission Rate, Rent/Month, Months, and Amount per line. Subtotal at the bottom. No tax.
- **Lincoln PDF:** Rental service report showing Unit #, Service, Move-in Date, Parking, Rent, Deposits, and Amount per line. Subtotal, tax (QST + GST = 14.975%), and total at the bottom.

Example — Forum commission invoice

Scenario: You are billing HMT Capital for leasing commissions on 7 units at 6% commission.

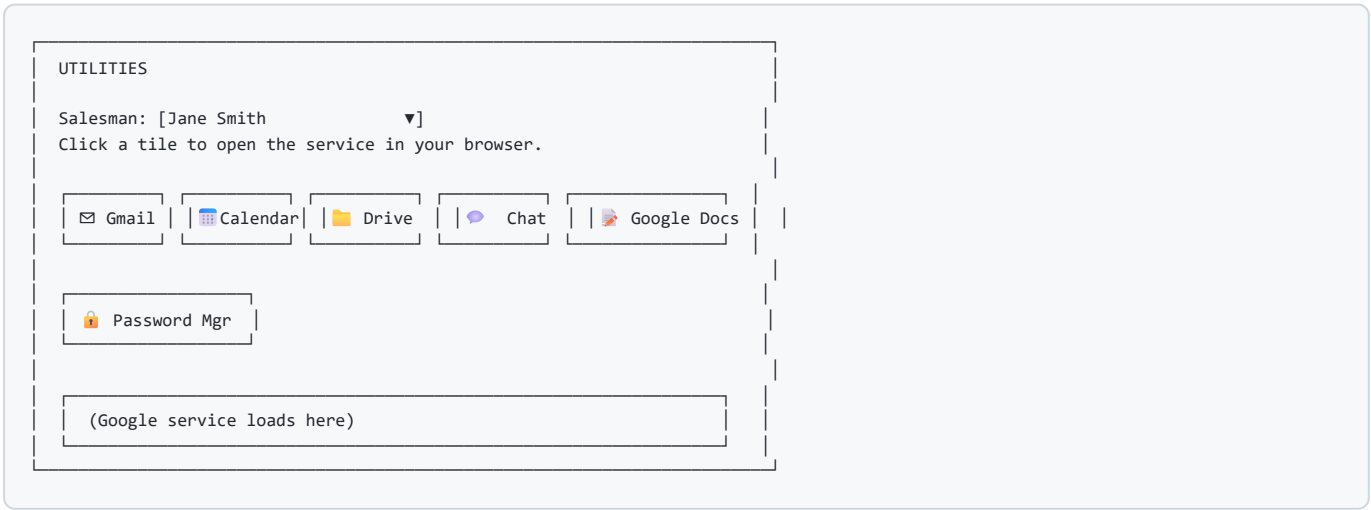

Unit #	Lease Start	Comm. Rate	Rent/Month	Months	Amount
1425-1	05/01/2026	6%	\$2,195	12	\$1,580.40
1435-1	05/01/2026	6%	\$1,895	12	\$1,364.40
...	...	...	...	...	...

The PDF subtotal is the sum of all line amounts. No tax is applied to commission invoices in the Forum format.

13. Utilities

The **Utilities** module gives you quick access to Google productivity services and the built-in Password Manager — all from within MyAccounting.

Click **Utilities** in the sidebar.

Google Service tiles

Tile	Service
Gmail	Google email (mail.google.com)
Google Calendar	Google Calendar (calendar.google.com)
Google Drive	Google Drive file storage (drive.google.com)
Google Chat	Google Chat messaging (chat.google.com)
Google Docs	Google Docs word processor (docs.google.com)

Clicking a tile opens the service in your default web browser. If the selected salesman has a **Google Email** configured (see **Configuration** → **Salesmen**), the service opens in that account automatically.

Salesman selector: Use the **Salesman** dropdown to switch which Google account is used. Each salesman can have their own Google Email stored in their salesman record.

To set up a salesman's Google account: Go to **Configuration** → **Salesmen** → **Edit**, enter the salesman's Gmail address in the **Google Email** field, and click **Save**.

Password Manager

Click the **Password Manager** tile to open the encrypted password vault.

PASSWORD MANAGER		
[Add] [Edit] [Delete] [Copy Password] [Open URL]		
Name	Username	URL
Bank Portal	jsmith@mycompany.com	https://bank.example.com
CRA My Account	123456789	https://cra-arc.gc.ca

Use the Password Manager to securely store website credentials, PINs, and other sensitive information. All passwords are encrypted with Fernet symmetric encryption before being written to the database.

Action	How
Add	Click Add , enter a name, username, password, and optional URL, then click Save
Edit	Select an entry and click Edit to update any field
Delete	Select an entry and click Delete — this is permanent
Copy Password	Select an entry and click Copy Password to copy the decrypted password to the clipboard
Open URL	Select an entry and click Open URL to launch the website in your browser

Security note: The encryption key is stored in %APPDATA%\MyAccounting\pm.key . Back up this file separately — if it is lost, stored passwords cannot be recovered. Never share this key file.

14. Frequently Asked Questions

Q: The Rent Service button does not appear in the sidebar. Why?

A: The Rent Service module is only available when your registration key has at least one report format assigned. Contact your administrator or SeguinDev support to verify your licence includes the Rent Service feature.

Q: I imported an Excel file into Rent Service but the lines are wrong.

A: Make sure you are using the correct template format. Forum invoices use an `.xls` file with a "Commission Invoice" sheet (columns: Unit #, Lease Start, Comm. Rate, Rent/Month, Months). Lincoln invoices use an `.xlsx` file with numbered sheets (columns: Service, Unit, Move-in Date, Parking, Rent, Deposits). If the column layout of your Excel file does not match, the import may skip rows or misread values.

Q: My stored passwords in the Password Manager are not opening. It says the key is missing.

A: The encryption key file (`pm.key`) must exist at `%APPDATA%\MyAccounting\pm.key` . If this file was deleted or the application was reinstalled without preserving it, the encrypted passwords cannot be recovered. Always back up `pm.key` when you back up your database.

Q: I saved an invoice but the customer's balance on the Dashboard did not change.

A: An invoice must be in **Draft** or **Approved** status to appear in AR Balances. Check the Status column in the invoice list — if it shows **Void**, it will be excluded. Also make sure the AR account is configured in **Configuration → Fiscal Year & Settings**.

Q: I posted a cash receipt to the wrong customer. What do I do?

A: Posted receipts cannot be edited or deleted. You will need to create a correcting journal entry to reverse the accounting effect, then create a new cash receipt for the correct customer. Ask your accountant for guidance.

Q: The invoice total looks wrong — the HST seems off.

A: Check **Configuration → Fiscal Year & Settings → Tax Rate**. The default is 13% (Ontario HST). If your business is in a different province, ask your administrator to update the rate.

Q: I cannot find the account I need when adding a journal line.

A: Start typing the account number or name in the Account field — the list filters as you type. If the account does not exist yet, an administrator can add it under **Chart of Accounts → New Account**.

Q: I posted a journal entry by mistake. How do I undo it?

A: Posted entries cannot be deleted. You need to create a **reversing entry** — a new journal entry with the exact same accounts and amounts, but with Debits and Credits swapped. Ask your accountant to confirm the reversing entry before you post.

Q: Can I bill a customer who is not in the customer list?

A: No. Ask your administrator to add the new customer first under **Configuration → Customers**, then come back to create the invoice.

Q: The Email button is greyed out on the invoice screen.

A: Two things are required for email to work: (1) the customer must have an email address on their record (**Configuration → Customers**), and (2) SMTP email settings must be configured (**Configuration → Email Settings**). Ask your administrator to check both.

Q: How do I see what a customer currently owes me?

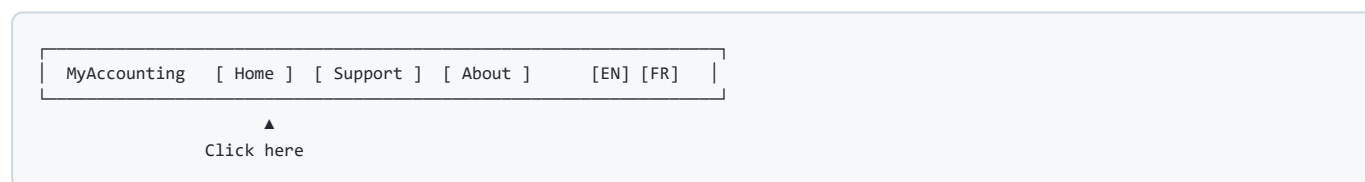

A: The **Dashboard → AR Balances** panel shows all outstanding balances. For more detail, open **Invoicing** and sort or filter by customer — all Draft and Approved invoices represent amounts owed.

15. Tips & Keyboard Shortcuts

What you want to do	How to do it
Go back to the home screen	Click Home in the sidebar, or click the application name at the top
Sort a list by any column	Click the column header; click again to reverse the sort order
Use the date picker	Click the  calendar icon next to any date field
Type a date manually	Use the format <code>MM/DD/YYYY</code> — for example <code>04/18/2026</code>
Search in an account dropdown	Start typing an account number or partial name to filter the list
Accept a dialog	Press Enter to click the default (highlighted) button
Close a dialog without saving	Press Escape
Switch between English and French	Click EN or FR at the bottom-left of the sidebar

16. Getting Support

The **Support** button is located in the main toolbar at the top of every screen. Use it whenever you have a question, encounter an error, or need help with something in MyAccounting.

What happens when you click Support

1. A **Support Request** dialog opens.
2. Fill in your name, contact information, the type of problem, and a description.
3. Click **Submit** — the message is emailed to the support address configured by your administrator (see **Configuration** → **Email Settings** → **Support Email**).
4. You will see a confirmation message: *"Your support request has been sent."*

SUPPORT REQUEST

Your Name:

Contact Info

(email / phone):

Type of Problem:

Bug / Error

▼

Description:

[Submit]

[Cancel]

Type of Problem options:

Option	Use when
Bug / Error	Something crashes or produces an unexpected error message
Question	You are not sure how to do something
Feature Request	You want a new capability added to the application
Performance Issue	The application is slow or unresponsive
Other	Anything that doesn't fit the categories above

Tips for writing a good support request

- **Be specific.** Instead of *"it doesn't work"*, say which module you were in and what you clicked.
- **Include the record number** if your question is about a specific invoice, receipt, or journal entry (e.g., *"Invoice INV-0042"*).
- **Describe what you expected to happen** and what actually happened.
- **Include any error message text** — copy it word for word.

Example — Reporting an invoice posting error

Scenario: You tried to approve Invoice INV-0051 and received an unexpected error message.

Your Name: Jane Smith

Contact Info: jsmith@example.com

Type of Problem: Bug / Error

Description:

I was in the Invoicing module and tried to approve invoice INV-0051 for Acme Corp (dated April 21, 2026, total \$2,712.00).

After clicking Approve, I received the following error message:
"GL account 4000 not found. Please check your configuration."

The invoice is still in Draft status. I have not changed any accounts recently.

Could you please help me figure out what is wrong?

After clicking **Send**, the message is delivered to your administrator's support email address. Your administrator can then look up the account configuration and reply with a fix.

*For further assistance, use the **Support** button in the main toolbar to send a message to your system administrator.*
