How to Connect Your Google Account to MyAccounting

> **Who is this for?** Anyone who wants to use Gmail, Google Calendar, or Google Drive right from the MyAccounting app.

What You Need Before You Start

You will need:

- A **Google account** (like a Gmail address — for example: `yourname@gmail.com`)
- About **15 minutes** of your time
- Access to the internet

Step 1 — Open the Salesman Settings

1. Click **Configuration** in the left menu.
2. Click the **Salesmen** tab at the top.
3. Click on your name in the list (for example: *Daniel Séguin*).
4. Click the **Edit Salesman** button.

A window will pop up. You will see a section called **Google Account Settings** near the bottom. That is where we are going!

Step 2 — Fill In Your Google Email

In the box next to **Google Email**, type your Gmail address.

Example:

```
danieloseguin67@gmail.com
```

Easy! That is just your regular Gmail address.

Step 3 — Get Your OAuth Client ID and Client Secret

This part sounds fancy, but think of it like getting a **special key** that lets MyAccounting talk to Google on your behalf.

Here is how to get that key:

3a — Go to the Google Cloud Console

1. Open your web browser (Chrome, Edge, Firefox, etc.)
2. Go to this address: **https://console.cloud.google.com**
3. Sign in with the same Google account you typed in Step 2.

3b — Create a Project (like creating a folder for your work)

1. At the very top of the page, click the button that says **Select a project** (it might say "No project" or show a project name).
2. Click **New Project**.
3. Give it any name you like — for example: `MyAccounting`.
4. Click **Create**.
5. Wait a few seconds, then make sure your new project is selected at the top.

3c — Turn On the APIs You Need

Think of APIs like **light switches** — you need to turn on the ones for Gmail, Calendar, and Drive.

1. In the left menu, click **APIs & Services**, then click **Library**.
2. Search for **Gmail API** → click on it → click **Enable**.
3. Go back to the Library, search for **Google Calendar API** → click on it → click **Enable**.
4. Go back to the Library, search for **Google Drive API** → click on it → click **Enable**.

3d — Set Up the OAuth Consent Screen

This is like filling in a name tag so Google knows who is asking for permission.

1. In the left menu, click **APIs & Services**, then click **OAuth consent screen**.
2. Choose **External** and click **Create**.
3. Fill in:
   - **App name**: MyAccounting (or anything you like)
   - **User support email**: your Gmail address
   - **Developer contact email**: your Gmail address
4. Click **Save and Continue** through the rest of the screens (you can skip the optional parts).
5. On the last screen, click **Back to Dashboard**.
6. Click **Publish App** and confirm. *(This just means you — as the user — can use it.)*

3e — Create Your Credentials (the actual key!)

1. In the left menu, click **APIs & Services**, then click **Credentials**.
2. Click the **+ Create Credentials** button at the top.
3. Choose **OAuth client ID**.
4. Under **Application type**, choose **Desktop app**.
5. Give it any name, for example: `MyAccounting Desktop`.
6. Click **Create**.

A little window will pop up showing you:

- **Your Client ID** — a long code ending in `.apps.googleusercontent.com`
- **Your Client Secret** — a shorter code

Copy these two codes and paste them into MyAccounting:

- Paste the **Client ID** into the **OAuth Client ID** box.
- Paste the **Client Secret** into the **Client Secret** box.

Step 4 — Save Your Settings

Click the **Save** button at the bottom of the Salesman window.

That's it! Your settings are saved. 🎉

Step 5 — Use Gmail, Calendar, or Drive in MyAccounting

1. Click **Utilities** in the left menu.
2. Make sure your name is selected in the **Salesman** dropdown at the top.
3. Click one of the three tiles:
   - 📧 **Gmail** — opens your email
   - 📅 **Google Calendar** — opens your calendar
   - 📁 **Google Drive** — opens your files

The service will open in your regular web browser, already pointed at your Google account.

Troubleshooting — Something Is Not Working?

Problem	What to Try
The Gmail / Calendar / Drive tile does not open	Make sure your default browser is set (Chrome or Edge work best)
Google says “Access blocked”	Go back to the OAuth consent screen and make sure you clicked **Publish App**
I forgot my Client ID	Go to console.cloud.google.com → **APIs & Services** → **Credentials** and it is listed there
Wrong Google account is opening	Check that the correct **Google Email** is saved in your Salesman settings

---

Quick Summary (The Short Version!)

What	Where to Get It	Where to Put It
Google Email	Your Gmail address	**Google Email** field
Client ID	Google Cloud Console → Credentials	**OAuth Client ID** field
Client Secret	Google Cloud Console → Credentials	**Client Secret** field

---

If you get stuck, ask a grown-up who knows about computers — or contact your system administrator!
